

It all started with a cup

...well 20,000 cups, thrown out each month at a local retirement community, that will last for more than 500 years in our landfill. They say there's no real solution for Styrofoam trash.

The Blockheads

But when we put our heads together, we can do anything!!!

1. We found an organic solution that dissolves polystyrene

2. We developed

The "EcoBin"^(SM)

3. A 6'x3'x3' stack became two cups of gooey stuff

4. We turned the goo into EcoGLOo! Non-toxic. Better than leading glues. Tested by our school, fellow Girl Scouts and the seniors who helped us.

A solution for Styrofoam. The EcoBin^(SM) for families and businesses.

EcoGLOo^(SM) for everyone!

Invented by Girls. Inspired by **FLL** and used by
